Oil prices see-sawed again, with Brent crude falling to around $88 a barrel. The *Wall Street Journal* reported that the International Energy Agency, a club of oil-consuming countries, had proposed releasing hundreds of millions of barrels from members' reserves. The Pentagon, meanwhile, claimed to have "eliminated" 16 Iranian mine-laying boats near the Strait of Hormuz. Tankers have all but stopped transiting the Strait.

America and **Israel** continued to pound **Iran**. Israel said it had struck military command centres in Tehran. Ahead of the new attacks, Pete Hegseth, America's defence chief, declared that they would be the "most intense" yet. Having previously declared the war would soon be over, Donald Trump vowed to "go further" if Iran continued to block oil supplies. Israel also launched fresh strikes against Hizbullah in Lebanon.

Iran's police chief warned that anyone protesting against the regime would be treated "the way we treat the enemy". Despite encouragement from Mr Trump and Binyamin Netanyahu, reform-minded Iranians have not yet taken to the streets in great numbers during this American-Israeli campaign. They are unlikely to until

the bombs stop dropping. Iran fired more missiles towards Israel and American facilities in Iraq and Qatar.

Oracle reported quarterly revenues of $17.2bn—a 22% rise on the same period a year ago—beating analysts' expectations. The software giant has been investing heavily in cloud-computing infrastructure to compete with Amazon and Microsoft. Oracle raised its revenue forecast for next year to $90bn, citing strong demand for its cloud services, which are used to train AI; its share price rose by 9% in after-hours trading.

Meta said it would acquire **Moltbook**, a no-humans-allowed social network for AI agents that launched in January and quickly went viral. It did not disclose the price. As part of the deal Meta will hire Moltbook's two co-founders to work at its "superintelligence labs", the technology giant's AI unit. It has spent hundreds of millions of dollars poaching researchers from rivals.

Police in **Canada** began investigating a "national-security incident" outside the **American consulate** in Toronto. Two people reportedly shot at the building before fleeing; no injuries were reported. The attack comes days after a series of shootings at synagogues in Toronto, although it is unclear if the incidents are related. Mark Carney, Canada's prime minister, called it an "attempt at intimidation".

Ursula von der Leyen suggested that Germany had been wrong to shut down its nuclear reactors—a phase-out it completed in 2023. The president of the European Commission said that it had been a "strategic mistake" for the bloc to "turn its back on a reliable, affordable source of low-emissions power". The EU's executive arm is promoting the roll-out of small modular reactors to diversify Europe's electricity supplies.

Europe’s plan to avert an energy crisis

On Wednesday Ursula von der Leyen, the president of the European Commission, will take part in a parliamentary debate about the war in the Gulf and its consequences. Among them are the sharp swings in oil prices and markets instability. Ms von der Leyen has called it a “stark reminder” of the vulnerabilities created by Europe’s dependence on fossil fuels.

Some European governments are weighing tax cuts on fuel; others want to cut environmental measures. (Viktor Orban, Hungary’s prime minister and an ally of the Kremlin, has called on the EU to lift its sanctions on Russian energy.) The arrival of spring and less demand for heating—plus measures taken to diversify supply after Russia invaded Ukraine in 2022—mean the continent is unlikely to run out of gas, but Europeans may still feel some financial pain. Leaders of the EU’s 27 member states will meet next week to discuss how to prevent a sharp rise in bills from hobbling its still-fragile economy.

War in Iran torpedoes America's progress on inflation

For a few months American inflation appeared to be cooling. By the start of 2026 Donald Trump's tariffs had in large part passed through to higher prices. Meanwhile, high interest rates took some heat out of the jobs market. The "affordability crisis" became a story of already-high prices, rather than still-rising ones.

But Mr Trump's attack on Iran triggered retaliatory strikes that blocked the Strait of Hormuz, a vital shipping lane. The benchmark West Texas Intermediate oil price surged by about 75%, peaking at around $120 per barrel before falling to around $85—still a quarter higher than before the war. Inflation figures for February, to be published on Wednesday, will not reflect the effects of the conflict. Forecasters think the annual price rise was 2.4%, above the Federal Reserve's 2% target but not by much. The real question will be what the numbers for March show and how much damage Operation "Epic Fury" has done to America's progress in reducing inflation.

The memory of Fukushima

On Wednesday Japan observes the 15th anniversary of the deadly earthquake that triggered the worst nuclear disaster since Chernobyl. A tsunami killed almost 20,000 people across the north of the country and triggered a meltdown at a nuclear power plant in Fukushima. The nuclear disaster displaced about 160,000 people from the surrounding area. With trust in nuclear power shattered, Japan closed all 54 of its remaining reactors.

Public opinion has since shifted. In 2013, a poll by *Asahi Shimbun*, a newspaper, showed that 58% of respondents were opposed to restarting the plants, while only 28% supported it; by 2023, support outnumbered opposition for the first time, as energy bills soared during the Ukraine war.

Wednesday's commemoration will therefore be held amid a striking policy reversal. Having pledged to reduce nuclear dependence after Fukushima, Japan's newly empowered government is now pursuing "maximum utilisation". In February TEPCO—the operator responsible for the Fukushima disaster—restarted the world's largest power station, on Japan's west coast.

Anthropic takes the Trump administration to court

A legal battle over who controls the world's most important technology is under way. On Tuesday representatives from Anthropic, an artificial-intelligence lab, and America's Department of War met at the behest of a federal judge in California to agree on a timeline for the case.

The spat has been ugly. On February 26th Anthropic refused to alter its contract with the Pentagon over fears its technology might be used for mass surveillance of Americans or in fully autonomous weapons. Donald Trump called Anthropic "left-wing nut jobs". A week later Anthropic became the first American company to be designated a supply-chain risk by the government, barring its models from defence projects. On Monday, Anthropic said that it was suing the DOW. The company has some sympathy among Silicon Valley's AI developers: more than 30 employees from Google and OpenAI, two rival AI giants, have filed an "amicus" brief in support.

The Norwegian underdog of European football

The 16 clubs that remain in the Champions League are a roll call of Europe’s elite squads. They include six from the money-soaked Premier League in Britain, three from Spain, Germany’s Bayern Munich and France’s Paris Saint-Germain, the defending champions.

Yet the name that stands out is Bodo/Glimt of Norway, whose 8,200-capacity home stadium is just inside the Arctic Circle. The club has won Norway’s Eliteserien league in four of the past six years. The minnow is now going after Europe’s big fish. Last season Bodo/Glimt reached the semi-finals of the Europa League, a level down from the Champions League. So far in the Champions League, they have defeated Atletico Madrid and Manchester City, two heavyweights, and knocked out Inter Milan, last year’s finalists, in the play-off round. If they win the first leg against Sporting Lisbon, one of the weaker teams in the tournament, on Wednesday, they could continue their improbable run into the quarter finals.
