Donald Trump claimed **King Charles III** “agrees with me even more than I do” that Iran should not have a nuclear weapon. A spokesperson from Buckingham Palace later clarified that, “The King is naturally mindful of his government’s long-standing and well-known position on the prevention of nuclear proliferation.” In his speech to America’s Congress on Tuesday, Britain’s monarch sought to salvage the countries’ battered “special relationship”, saying that global challenges meant ties were “more important” than ever.

Regulators charged **Meta** with breaking **EU law** by failing to prevent children under the age of 13 from using its platforms. Following a two-year investigation, the European Commission said the tech giant, which owns Facebook and Instagram, failed to adequately enforce age restrictions. If the charges are upheld, Meta could be fined up to 6% of global annual turnover.

Russia attacked **Ukraine’s** port facilities in the country’s southern Odessa region. The overnight drone strike also damaged a hospital and residential buildings, leaving two people wounded. Many of Ukraine’s most important ports are located in Odessa, with over 82m tons of cargo passing through the region in 2025.

The United Arab Emirates said it would leave the **Organisation of the Petroleum Exporting Countries** on May 1st, after six decades of membership. The departure will weaken—though not fatally—a group that supplies around a third of the world's oil. The UAE's energy minister, Suhail al-Mazrouei, told Reuters that the decision was taken "after a careful look at current and future policies related to level of production."

Elon Musk told a jury in California that his case against **Sam Altman**, boss of OpenAI, rests on the principle that "It's not okay to steal a charity." Mr Musk claims he donated $38m on the basis that the ChatGPT-maker would remain a non-profit. Mr Altman turned it into a commercial venture now valued at $850bn. OpenAI claims Mr Musk withdrew funding after "he didn't get control of the company."

An **Israeli strike** on the **Lebanese** border town of Majdal Zoun wounded two soldiers and trapped three rescuers under rubble, according to the Lebanese army. The attack, which occurred during an American-brokered ceasefire, hit troops and emergency workers who were carrying out a rescue operation in response to an earlier attack. Lebanon's health ministry said that at least 2,534 people have been killed and 7,863 wounded since early March.

British MPs voted against opening an inquiry into whether **Sir Keir Starmer** misled Parliament over his appointment of **Peter Mandelson** as ambassador to America. The motion, brought by the opposition Conservative Party, was defeated by a wide margin as Labour MPs voted it down. A finding that he misled parliament could have intensified calls for Sir Keir's resignation.

Figure of the day: 30%, the rise since November in the cost of renting Nvidia's H100 AI chips. Read our story on the tightening bottlenecks in AI infrastructure.

What the UAE’s exit means for OPEC

When OPEC meets on Wednesday, the club will be contemplating the departure of one of its longest-standing members. The United Arab Emirates will leave on May 1st after years of tension over production quotas, exacerbated by its rivalry with Saudi Arabia, the group’s biggest exporter and de facto enforcer.

The move will have little immediate impact. Iran’s blockade of the Strait of Hormuz is choking off exports across the Gulf, limiting the UAE’s ability to raise output even outside the cartel. But once flows resume, the country will be free to pump without restraint; it plans to raise production capacity to around 5m barrels a day by 2027, up from 3.6m before the war.

That could complicate OPEC’s efforts to manage supply. Saudi Arabia may have to cut output further to support prices, especially if others also chafe at quotas. The cartel has weathered exits before. Yet as internal strains deepen and its share of global production declines, its influence over oil markets looks set to weaken.

An end to the Powell era at the Fed

It briefly looked as though Jerome Powell would remain Federal Reserve chair beyond the end of his term in May; Thom Tillis, a Republican senator, threatened to hold up the appointment of his replacement, Kevin Warsh, unless the Department of Justice dropped a spurious probe into Mr Powell. On April 24th the DOJ backed down. Wednesday's interest-rate decision and press conference are almost certainly Mr Powell's last. With inflation rising again, expect the bank to hold rates.

No Fed chair since Paul Volcker in the 1980s has had to deal with so nasty an inflation shock. And none since Arthur Burns in the 1970s (at least) has faced quite so much political interference. A zen retirement may be some way off, though. Former chairs usually depart the bank, but Mr Powell has vowed to stay on as one of seven governors until the DOJ investigation is wrapped up (some loose threads remain) and possibly beyond. Per the central bank's rules, he could stay until 2028.

Big tech goes all in on AI

Investors are holding their breath. Four big tech firms with pledges to spend upwards of $600bn this year on AI infrastructure report earnings on Wednesday. Alphabet, Amazon, Meta and Microsoft, collectively worth almost $12trn, will provide an unprecedented snapshot of the state of AI computing. The cloud businesses of Alphabet and Amazon are likely to benefit from their close relationships with Anthropic, an AI lab whose revenues surged in the past three months. Microsoft, which has had stronger links with OpenAI, maker of ChatGPT, will be closely watched to see whether its software business, particularly its Copilot AI chatbot, is accelerating.

The question for Meta is whether strong ad revenues and job cuts announced this month will help cover capital spending. A broad concern is whether all four can fulfil their spending plans. Data-centre construction is suffering from popular opposition in America, and chips and energy are in short supply. The mega-caps are not all masters of their own destinies.

AstraZeneca’s moveable feast

On Wednesday AstraZeneca reported an 8% year on year increase in quarterly revenue to $15.3bn, driven by demand for its cancer drugs. The firm’s performance also proves that diplomacy pays dividends. Last year, the Anglo-Swedish drugmaker pledged a $50bn investment in America. Sir Pascal Soriot, its boss, said the decision was driven by “belief in America’s innovation”—nothing to do with looming tariffs. The Trump administration granted it a three-year exemption shortly afterwards.

Sir Pascal has also courted China, where AstraZeneca is investing billions of dollars. And he has tried to smooth tensions with Britain’s government. After cancelling investment in the country, he joined Sir Keir Starmer’s trade delegation to China. When the EU accused AstraZeneca of avarice over its distribution of the covid vaccine in 2021, Sir Pascal asserted the firm was “European as much as we are British”. So far, playing all sides has paid off: AstraZeneca’s valuation has grown almost six-fold under Sir Pascal.

Donald Trump’s immigration policy in court

On Wednesday America’s Supreme Court will consider the Temporary Protected Status programme, a target of Donald Trump’s crackdown on immigration. As of March 2025, some 1.3m people from 17 countries ravaged by war or humanitarian crises were protected from deportation and authorised to work in America under TPS.

Mr Trump’s attempts to terminate many of these designations have faced resistance from lower courts In two related cases, the Supreme Court will decide whether the abolition of TPS for 350,000 Haitians and 6,000 Syrians is legally sound.

The government argues its decisions to cancel these designations are not subject to judicial review. And, even if they are, it insists its actions were valid and based on “weighty foreign-policy and national-security considerations”. Challengers counter that the government seeks “a massive expansion of power” and has not adequately considered conditions in Syria and Haiti. A decision is expected by July.

Daily quiz

We will serve you a new question each weekday. On Friday your challenge is to give us all five answers and tell us the theme. Email your responses (and your home city and country) by 1700 GMT on Friday to . We'll pick three winners at random and crown them on Saturday.

Wednesday: The median appears at which point of a statistical distribution?

Tuesday: Which breed of horse, originating in England, was notable for its strength, being used to pull canal boats and brewers' carts, as well as farm equipment?

Economics is extremely useful as a form of employment for economists.

John Kenneth Galbraith
