Pete Hegseth, America's secretary of war, gave **Anthropic**, an AI lab, until Friday to allow the **Pentagon** freer access to its Claude models. Meeting Dario Amodei, Anthropic's boss (pictured), Mr Hegseth threatened to list the company as a supply-chain risk—a classification that would bar any defence contractor from using Claude—or invoke the Defence Production Act to in effect force Anthropic to comply.

European leaders met in Kyiv, **Ukraine's** capital, to mark the **four-year anniversary** of Russia's full-scale invasion. Ukraine's president, Volodymyr Zelensky, pressed his guests to give a date for his country's accession to the European Union, arguing that without one Russia's leader, Vladimir Putin, would seek to divide the bloc. Hungary recently vetoed a planned €90bn ($106bn) EU support package for Ukraine.

Meta agreed to buy up to $60bn-worth of artificial-intelligence chips from AMD, an American chipmaker, over five years. The deal also allows the social-media giant to buy up to 10% of AMD's shares. The circular agreement resembles one that AMD struck with OpenAI, the maker of ChatGPT, last year, which also offered shares in return for buying chips.

Russia launched a criminal investigation into Pavel Durov, the founder of **Telegram,** a messaging app. Russian newspapers reported that Mr Durov, a Russian-born billionaire now based in the United Arab Emirates, was suspected of assisting "terrorist activities". The Kremlin has been trying to rein in apps such as Telegram and WhatsApp, an American messaging service, as it pushes users onto its own platforms.

American forces seized an **oil tanker** in the Indian Ocean which was under Iran-related sanctions. The Pentagon said the *Bertha*, a ship flagged to the Cook Islands, had attempted to evade Donald Trump's "quarantine of sanctioned vessels" in the Caribbean, imposed in December to pressure Venezuela's regime. It is the third such capture in the Indian Ocean.

China banned exports of various materials that it argued could be used to make weapons to 20 **Japanese** firms. It said the measures —placed on "dual-use" components like rare earths and advanced manufacturing equipment—were in response to Japan's rearmament efforts. Those targeted include the shipbuilding and aerospace arms of Mitsubishi Heavy Industries, an industrial giant.

Laurence des Cars resigned as the director of the **Louvre**, months after a brazen heist at the world's largest art museum. In October thieves broke in during daylight, making off with jewels worth $102m in seven minutes. A recent parliamentary inquiry blamed the burglary on "systemic failures". Emmanuel Macron, France's president, called Ms des Cars's resignation an "act of responsibility".

Figure of the day: 122.5bn, the number of times country-music songs were streamed in America in 2025. Read the full story.

The volatile state of America

Donald Trump's signature policies—immigration and trade—have become serious liabilities. Deadly clashes between federal agents and the public in Minneapolis turned Americans against his deportation agenda; the Supreme Court just undid his tariff regime. Mr Trump's approval rating has never been lower.

The president's state-of-the-union speech on Tuesday will be his opportunity to wrest back the narrative. Affordability will be an important theme: expect Mr Trump to brag about the mega tax cut offered by his One Big Beautiful Bill, which should see individuals receive $106bn this year. He will say less about health care (cuts to insurance subsidies have sent some premiums skyrocketing). And Mr Trump may talk about his approach to Iran, where an American attack seems imminent. Viewers may end up more, not less, confused about where he is taking America: a symptom of a president who thumbs his nose at Congress and at public opinion.

Fear of AI is rattling the software trade

Three large American software firms—Workday, Salesforce and Intuit—report earnings this week. Investors once prized such companies for high margins and steady subscription revenue. Now they fear disruption from AI. Coding tools from labs such as Anthropic and OpenAI have raised concerns that customers will rely less on established providers. Businesses may instead build similar services more cheaply themselves or turn to AI-native startups offering comparable products at lower cost.

Those worries are weighing on valuations. Since January the share prices of Salesforce and Workday have fallen by around a third, and Intuit's by two-fifths. Over the same period an index of software firms in the S&P 500 has dropped by about a fifth. Bosses insist the market has it wrong. They argue that incumbents are better placed to embed AI in their products, cut development costs and widen margins. Their challenge is to convince investors that AI will strengthen, not undermine, their business.

Code in the crosshairs

Germany’s troubled relationship with China

On Tuesday Friedrich Merz will embark on his first trip to China since taking office as German chancellor. His much-trailed visit, on which he will be accompanied by a planeload of CEOs, will mean useful facetime with the leader of Germany’s largest trading partner; the chancellor meets Xi Jinping on Wednesday. But it will also be shaped by the darkening mood at home.

German bosses who once saw China’s vast market as an El Dorado increasingly regard it as a threat. The trade deficit has soared. Small- and medium-sized manufacturing firms fear Chinese competitors—high on subsidies and exploiting a cheap yuan—coming for their business at home and abroad. China’s decision last year to weaponise its supply of chips and rare earths threatened to halt German production lines. Meanwhile, securocrats are sounding the alarm over espionage, hacking and China’s support for Vladimir Putin’s war in Ukraine. Little wonder “de-risking” will be a mantra for Mr Merz throughout his trip.

Brazil: a sleeping giant

Brazil's economy has proven remarkably resilient. Newly released data show that its economy grew around 2.5% in 2025. Despite one of the world's highest interest rates—15%—the economy is running hot. Inflation is slightly above the central bank's target of 3%; unemployment is at record lows. The bank is expected to begin lowering the interest rate as soon as March. That would be a boon to President Luiz Inácio Lula da Silva, who is running for re-election in October.

Yet Brazil's economy has deep underlying problems. High interest rates have blown up the country's debt, putting pressure on the nominal deficit and leaving little room for private investment. The country's debt burden—which is higher than its Latin American peers—is on course to hit 99% of GDP by 2030, up from 62% in 2010, according to the IMF. Doomsayers warn of an impending fiscal crisis. Brazil may be growing, but it is punching beneath its weight.

Daily quiz

We will serve you a new question each weekday. On Friday your challenge is to give us all five answers and tell us the theme. Email your responses (and your home city and country) by 1700 GMT on Friday to . We'll pick three winners at random and crown them on Saturday.

Tuesday: Which American statesman helped create the League of Nations, although he failed to persuade America to join?

Monday: Which American statesman who was secretary of state under Richard Nixon died in 2023 at the age of 100?

People who never get carried away should be.

Malcolm Forbes
